# WHAT WE WANT TO KNOW

- How is the data stored?
- How does their API look like?
- What features are provided?
- How large is the performance impact?

# DATABASE LAYOUT

# STYLE 1: SEPARATE TABLE

| <u>id</u> | <u>year</u> |
|-----------|-------------|
| 1         | 2009        |

| <u>master_id</u> | <u>lng</u> | <u>title</u>       |
|------------------|------------|--------------------|
| 1                | en         | Angels and daemons |
| 1                | it         | Angeli e demoni    |

used by: django-hvad, django-parler, klingon\*

\* one table for all, GenericForeignKey

## STYLE 2: SEPARATE FIELDS

| <b>id</b> | <b>year</b> | <b>title_en</b>       | <b>title_it</b>    |
|-----------|-------------|-----------------------|--------------------|
| 1         | 2009        | Angels and<br>daemons | Angeli e<br>demoni |

used by: django-modeltranslation

# STYLE 3: COMPOUND FIELDS

| id | year | title |
|----|------|-------|
|----|------|-------|

---

|   |      |  |
|---|------|--|
| 1 | 2009 | {"en": "Angels and demons", "it": "Angeli e demoni"} |
|---|------|--|

# MODEL DEFINITION

# STYLE 1: CUSTOM BASE CLASS

```
class Movie(TranslatableModel):  
    translations = TranslatedFields(  
        title = models.CharField(max_length=190)  
    )  
    year = models.IntegerField()
```

or

```
class Movie(TranslationModel):  
    title = models.CharField(max_length=190)  
    year = models.IntegerField()  
  
    class Meta:  
        translatable_fields = ('title',)
```

used by: django-hvad, django-parler, klingon,  
nece

# STYLE 2: CUSTOM FIELD TYPE

```
class Movie(models.Model):  
    title = I18nCharField(max_length=190)  
    year = models.IntegerField()
```

used by: [django-i18nfield](#)

# STYLE 3: REGISTRATION-BASED

```
class Movie(models.Model):  
    title = models.CharField(max_length=190)  
    year = models.IntegerField()
```

```
@register(ModeltransMovie)  
class MovieTranslationOptions(TranslationOptions):  
    fields = ('title',)
```

used by: django-modeltranslation

# OBJECT INTERACTIONS

# STYLE 1: ONE AT A TIME

```
o = Movie.objects.language('it').first()
print(o.title) # Angeli e demoni
o.set_current_language('en')
print(o.title) # Angels and demons
```

used by: django-hvad, django-parler, nece

# STYLE 2: ALL AT ONCE

## django-modeltranslation:

```
translation.activate('it')
o = Movie.objects.first()
print(o.title) # Angeli e demoni
print(o.title_en) # Angels and daemons
```

## django-i18nfield:

```
translation.activate('it')
o = Movie.objects.first()
print(o.title) # Angeli e demoni
print(repr(o.title)) # {'it': Angeli e demoni,
                    # 'en': 'Angels and daemons'}
print(o.title.localize('en')) # Angels and daemons
```

# STYLE 3: EXPLICIT

```
translation.activate('it')
o = Movie.objects.first()
print(o.title) # Angels and demons
print(o.get_translation('it', 'title')) # Angeli e demoni
```
